ABORIGINAL AIDS AWARENESS WEEK

December 1–5 2011

Inuit Communities Support Change!

We all need to know about HIV and AIDS. Traditionally, Inuit are survivors. As a community, we have always known challenges and created a way forward. HIV is a new challenge in our landscape, but we can decide how to educate ourselves and our children about HIV. We can name the HIV risks in our community and teach ourselves - elders, adults, youth, children - about ways to prevent infection and support people living with HIV.
